

ABSTRACT

The invention provides an inorganic powder-containing resin composition capable of forming a dielectric layer having high light transmittance and excellent in surface smoothness. The invention also provides a film-forming material layer, a transfer sheet and a dielectric layer, which comprise the composition, a method of producing a substrate having a dielectric layer formed thereon, and a substrate having a dielectric layer formed thereon. The inorganic powder-containing resin composition comprises inorganic powder, a binder resin, and a phosphorus compound represented by formula (1):

wherein R^1 , R^2 and R^3 independently represent H, an alkyl group, an alkylaryl group, NH_4^+ (ammonium) or $-(\text{CH}_2\text{CH}_2\text{O})_n-\text{R}^4$, wherein n is 1 to 15, and R^4 represents H, an alkyl group, an alkylaryl group or a (meth)acryloyl group.
